All rights reserved. No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without permission in writing from the publisher.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the U.S.A. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, SALEM, MA 01970 (U.S.A.). If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1980 may be copied for a per-copy fee of U.S. $2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purpose, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

Special regulations for authors in the U.S.A. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information under the U.S. Copyright Law.

Contents

Volume 107 (1983)

Plasmid R46 fails to protect *Escherichia coli* against double-strand DNA-binding agents but increases their mutagenic activities
by P.V. Attfield and R.J. Pinney (London) 1– 12
Role of AP endonuclease in DNA breakage and cell inactivation of *Escherichia coli* subjected to mild heat (52°C)
by D.M. Williams-Hill and N. Grecz (Argonne and Chicago) 13– 21
Mutagenesis in *Streptococcus pneumoniae* (Pneumococcus) by transformation with DNA modified by the carcinogen–mutagen, aflatoxin B_1
by Avishay A. Stark and Craig N. Giroux (Tel-Aviv and Chicago) 23– 32
Induction of prophage lambda in *Escherichia coli recA*$^-$ strain by *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine
by Kazuo Yamamoto, Hideo Shinagawa and Sohei Kondo (Kobe, Suita and Osaka) . . . 33– 40
Mutator activity in *Schizophyllum commune*
by Y. Shneyour and Y. Koltin (Ramat Aviv) 41– 51
Mutagenic activity of selected aromatic amines and polycyclic hydrocarbons in *Drosophila melanogaster*
by E.W. Vogel, J.A. Zijlstra and W.G.H. Blijleven (Leiden) 53– 77
Studies on mutagen-sensitive strains of *Drosophila melanogaster*
II. Detection of qualitative differences between genetic damage induced by X-irradiation of mature spermatozoa in oxygenated and anoxic atmospheres through the use of the repair-deficient mutant *mei-9*^{a}
by W. Ferro (Leiden) 79– 92
Induction of chromosome aberrations by chemical mutagens in neural ganglia of *Drosophila melanogaster*
by Antonio de Marco and Stefania Polani (Rome) 93–102
SCE induction is proportional to substitution in DNA for thymidine by CldU and BrdU
by M.W. Heartlein, J.P. O'Neill and R.J. Preston (Oak Ridge) 103–109
X-Ray-induced dicentric yields in lymphocytes of the teleost, *Umbra limi*
by Ippei Suyama and Hisami Etoh (Chiba) 111–118
SCE evaluations in human lymphocytes after G_0 exposure to mitomycin C
Lack of expression of MMC-induced SCEs in cells that have undergone greater than two in vitro divisions
by L. Gayle Littlefield, Shirley P. Colyer and R.J. DuFrain (Oak Ridge) 119–130
The induction of chromosomal damage in rat hepatocytes and lymphocytes
I. Time-dependent changes of the clastogenic effects of diethylnitrosamine, dimethylnitrosamine and ethyl methanesulfonate
by A.D. Tates, I. Neuteboom, N. de Vogel and L. den Engelse (Leiden and Amsterdam) 131–151
The induction of chromosomal damage in rat hepatocytes and lymphocytes
II. Alkylation damage and repair of rat-liver DNA after diethylnitrosamine, dimethylnitrosamine and ethyl methanesulphonate in relation to clastogenic effects
by L. den Engelse, B.G.J. Floot, R.-J. de Brij and A.D. Tates (Amsterdam and Leiden) . 153–166

0027-5107/83/0000–0000/$03.00 © Elsevier Biomedical Press

Electrophoretically detectable mutations induced in CHO cells by varying doses of ultraviolet radiation
by Michael J. Siciliano, Billie F. White and Ronald M. Humphrey (Houston and Smithville) 167–176
Radiation induction of mutations affecting sperm morphology in mice
by A.P. Hugenholtz and W.R. Bruce (Toronto) 177–185
High proportion of multi-locus deletions among hycanthone-induced X-linked recessive lethals in *Drosophila melanogaster*
by P.G.N. Kramers, A.P. Schalet, E. Paradi and L. Huiser-Hoogteyling (Bilthoven, Leiden and Budapest) 187–201
Misincorporation in DNA synthesis after modification of template or polymerase by MNNG, MMS and UV radiation
by Michiko Miyaki, Kazutoshi Suzuki, Madoka Aihara and Tetsuo Ono (Tokyo) 203–218
Antimutagenic effects of cinnamaldehyde on chemical mutagenesis in *Escherichia coli*
by T. Ohta, K. Watanabe, M. Moriya, Y. Shirasu and T. Kada (Tokyo and Mishima) .. 219–227
Drift in ultraviolet sensitivity and expression of mutations during synchronous growth of cyanobacterium *Anacystis nidulans*
by D.V. Amla (Lucknow) 229–238
Influence of conjugation reactions on the mutagenicity of aromatic amines
by Jan Hongslo, Lise Timm Haug, Peter J. Wirth, Mona Møller, Erik Dybing and Snorri S. Thorgeirsson (Oslo and Bethesda) 239–247
Disomic and diploid meiotic products in *Saccharomyces cerevisiae*
Effect of vincristine, vinblastine, adriamycin, bleomycin, mitomycin C and cyclophosphamide
by Silvio Sora, Massimo Crippa and Giovanna Lucchini (Milano) 249–264
Dominant lethal mutation rate after γ-irradiation of the fish, *Oryzias latipes*
by N. Egami, A. Shimada and A. Hama-Furukawa (Tokyo) 265–277
Lethal and mutagenic effects of radiation and chemicals on cultured fish cells derived from the erythrophoroma of goldfish (*Carassius auratus*)
by Hiroshi Mitani (Tokyo) 279–288
Independent induction of sister-chromatid exchanges by 3-aminobenzamide and ultraviolet radiation in HeLa cells
by Fuminori Otsuka, Hisako Ohno, Takemi Enomoto, Fumio Hanaoka and Masa-atsu Yamada (Tokyo) 289–296
Studies on endoreduplication
III. Endoreduplication induced by mitomycin C in PHA-stimulated tonsillar lymphocyte cultures
by Hideki Takanari and Kosaku Izutsu (Mie-ken) 297–306
The exchange hypothesis for the formation of chromatid aberrations: an experimental test using bleomycin
by A.M.V. Duncan and H.J. Evans (Edinburgh) 307–313
Induction of sister-chromatid exchanges by DNA-damaging agents and 12-*O*-tetradecanoyl-phorbol-13-acetate (TPA) in synchronous Chinese hamster ovary (CHO) cells
by Hatsumi Nagasawa, Donald Fornace and John B. Little (Boston) 315–327
Modifying effects of the enzyme inducers, phenobarbital and 3-methylcholanthrene, on dominant lethal events induced by 7,12-dimethylbenz[*a*]anthracene in mice
by Tetsuro Murota and Tohru Shibuya (Kanagawa-Ken) 329–336
X-Ray-induced reciprocal translocations in stem-cell spermatogonia of the rhesus monkey: dose and fractionation responses
by Paul P.W. van Buul (Leiden) 337–345
Ultraviolet light-induced mutation of diploid human lymphoblasts
by J.G. DeLuca, L. Weinstein and W.G. Thilly (Cambridge) 347–370

Multiple hypersensitivity to mutagens in a cell strain (46BR) derived from a patient with immuno-deficiencies
by I.A. Teo, C.F. Arlett, S.A. Harcourt, A. Priestley and B.C. Broughton (Brighton) . . . 371–386
Differential features of sister-chromatid exchange responses to ultraviolet radiation and caffeine in xeroderma pigmentosum lymphoblastoid cell lines
by Hiroko Tohda and Atsushi Oikawa (Sendai) 387–396
8-Azaguanine versus 6-thioguanine: Influence on frequency and expression time of induced HGPRT$^-$ mutations in Chinese hamster V79 cells
by Carlo M. Colella, Giuseppe Rainaldi and Antonio Piras (Pisa) 397–411
Survival and PHA-stimulation of γ-irradiated human peripheral blood T lymphocyte subpopulations
by Jeffrey L. Schwartz, J.C. Darr and Mary Esther Gaulden (Dallas) 413–425
Inability of diethylstilbestrol to induce 6-thioguanine-resistant mutants and to inhibit metabolic cooperation of V79 Chinese hamster cells
by J. Carl Barrett, John A. McLachlan and Eugene Elmore (Research Triangle Park) . . 427–432
Characterization of chloramphenicol- and 8-azaguanine-resistant mutants isolated from a continuous rat-liver epithelial cell line
by Oscar Sudilovsky, Libby R. Friedman and Lally Sudilovsky (Cleveland) 433–445
Microcell-mediated transfer of carcinogen-induced ouabain resistance from C3H/10T1/2 Cl 8 mouse fibroblasts to human cells
by Joseph R. Landolph and R.E.K. Fournier (Los Angeles) 447–463
UV micro-irradiation of the Chinese hamster cell nucleus and caffeine post-treatment Immunocytochemical localization of DNA photolesions in cells with partial and generalized chromosome shattering
by C. Cremer, T. Cremer, L. Hens, H. Baumann, J.J. Cornelis and K. Nakanishi (Freiburg, Heidelberg, Brussels, Rhode St. Genèse and Kyoto) 465–476

Contents, Vol. 107 (1983) 477–479

Instructions to Authors 480

The Author Index and the Subject Index covering all volumes published in 1983 will appear as a separate issue by the end of the year.

MUTATION RESEARCH

International journal on mutagenesis, chromosome breakage and related subjects

INSTRUCTIONS TO AUTHORS

Types of paper *Mutation Research* contains 3 types of publication. (1) Papers reporting results of original fundamental research concerning mutagenesis, chromosome breakage and related subjects. (2) Review articles. (3) Short communications (published in the Section *Mutation Research Letters*).

General arrangement of papers Papers should be preferably in English, but may also be submitted in French or German. A summary (about 300 words) is mandatory for all (normal-length) articles. Papers in German or French should have a summary in English. The first paragraph of the article should summarize the research problem and the pertinent findings. The main text may be divided into sections such as Materials and methods, Experimental, Results, Discussion.

In papers mentioning chemicals, authors are requested to include *CAS registry numbers*. Registry numbers can be found by consulting Chemical Abstracts Ninth Collective Molecule Formula Index, by using Lockheed's computer access file named Chemline or by contacting the Chemical Abstracts Service, P.O. Box 3012, Columbus, Ohio 43210 (U.S.A.).

Preparation of text (a) Manuscripts should be typewritten, double-spaced with wide margins, on one side of the paper only. Legends, footnotes—everything—must also be double-spaced. (b) The full postal address(es) of the author(s), including postal code and country, should be given after their name(s). (c) Line-drawn figures (including graphs) should be submitted in black ink on white paper and must be lettered ready for direct reproduction. Sharp photoprints of lettered line drawings may also be submitted. It is important that the drawings themselves AND the lettering are in proportion and large enough to allow for reduction before printing. The amount of reduction that will be made can be judged from the sizes of figures in recent issues of the journal. (d) Half-tone figures should be submitted as very sharp and contrasty glossy photoprints, separate from line drawings. (e) Legends for both line-drawn and half-tone figures should be typed on separate sheets. (f) Tables (also to be typed double-spaced) should be provided with headings. (g) Typescripts should be carefully checked before submission to obviate alterations after acceptance.

References The journal uses the Harvard system, in which names and dates are given in the body of the text and an alphabetical list of references at the end of the manuscript. References in the text should give the author's surname with the year of publication, e.g.: Smith (1980); Smith and Jones (1967a, 1979b); Baker et al. (1978). In the list of references, titles of journals should be abbreviated to conform with *Chemical Abstracts Bibliographic Guide for Authors and Editors 1974*. References to books should give details of chapter title, editors, title of the book, publishers and their location.

Examples:

Ehrenberg, L., and C.A. Wachtmeister (1977) Safety precautions in work with mutagenic and carcinogenic chemicals, in: B.J. Kilbey, M.S. Legator, W. Nichols and C. Ramel (Eds.), Handbook of Mutagenicity Test Procedures, Elsevier, Amsterdam, pp. 401–410.

Kastenbaum, M.A., and K.O. Bowman (1970) Tables for determining the statistical significance of mutation frequencies, Mutation Res., 9, 527–549.

Contributions—in triplicate (one original plus two copies, also of the illustrations)—may be sent to Prof. F.H. Sobels, Managing Editor, *Mutation Research*, Department of Radiation Genetics and Chemical Mutagenesis, State University of Leiden, Sylvius Laboratories, Wassenaarseweg 72, 2333 AL Leiden (The Netherlands).

or to

Dr. F.J. de Serres, *Mutation Research*, NIEHS, P.O. Box 12233, Research Triangle Park, NC 27709 (U.S.A.).

Manuscripts in the field of Molecular Genetics may be submitted to
Dr. B.W. Glickman, *Mutation Research*, NIEHS, Laboratory of Molecular Genetics, P.O. Box 12233, Research Triangle Park, NC 27709 (U.S.A.).
